AI CAREERS FOR WOMEN

LINKEDIN FELLOWSHIP

content creation and marketing copygeneration using prompt engineering

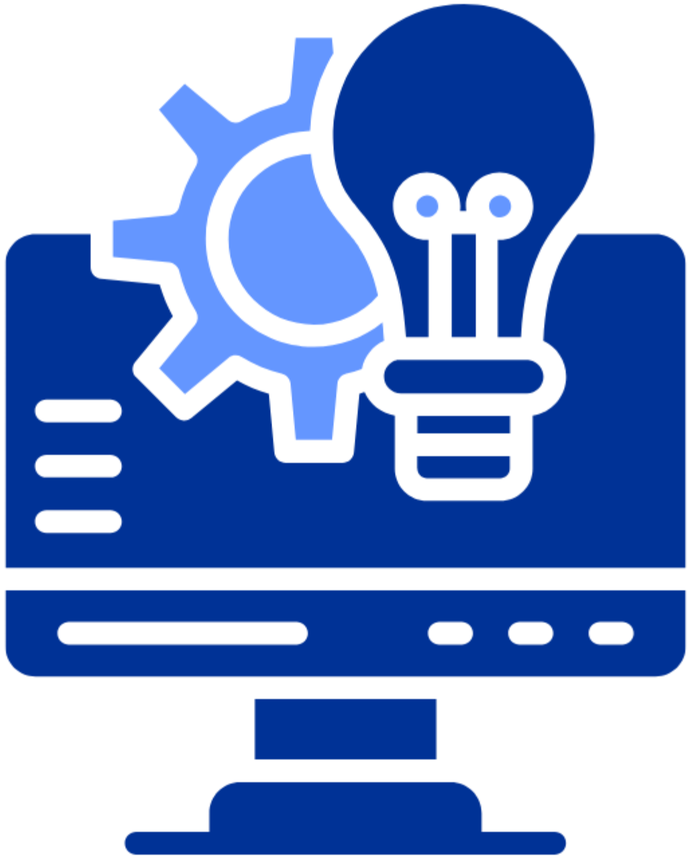
Student Name
Shreya Chaturvedi

Student Email
shreyachaturvedic@gmail.com

Mentor Name
Uma Maheshwari

Outline

- Abstract of the Project
- Problem Statement
- Proposed Solution
- System Architecture
- Live Demo of the Project
- Embedded Video of Project
- Conclusion
- Future Scope



Abstract

- This project focuses on improving AI-generated marketing content using
- structured prompt engineering techniques.
- The study primarily uses Microsoft Copilot
- to generate content and enhance output quality.
- A dataset of 15 content briefs was created and evaluated based on parameters such as
- Clarity, creativity, tone, relevance, and persuasiveness.
- The results were analyzed using Microsoft Excel, showing a significant improvement in content quality after applying structured prompting techniques.
-

Problem Statement

- Small businesses and non-technical users face challenges in effectively
- using AI tools like Microsoft Copilot.
- Many users, especially those with limited digital literacy, are unable to
- create structured prompts, resulting in low-quality and inconsistent outputs.
- Additionally, concerns related to data security and trust reduce confidence in using AI tools.
- As a result, the full potential of AI remains underutilized.

Proposed Solution

- To address this problem, structured prompt engineering techniques
- were used, including:
- Role Prompting
- Few-shot Prompting
- Chain-of-thought Prompting
- Iterative Refinement
- These techniques were applied using Microsoft Copilot to generate improved marketing content.
- The output was evaluated using multiple quality parameters.

System Architecture

Data Input / Source

data set structured content briefs
Includes prompt technique score before prompt engineering score after prompt engineering

Processing / Analysis

Standardized dataset used
Outputs evaluated using different prompt techniques

AI / Tool Integration

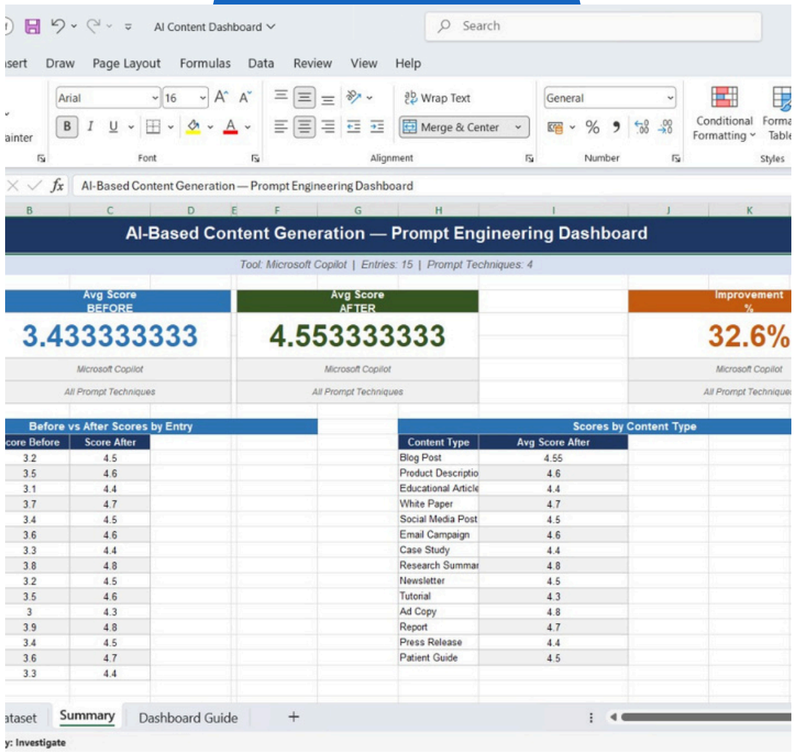
Microsoft Copilot used for comparison
Excel used for tracking and analysis

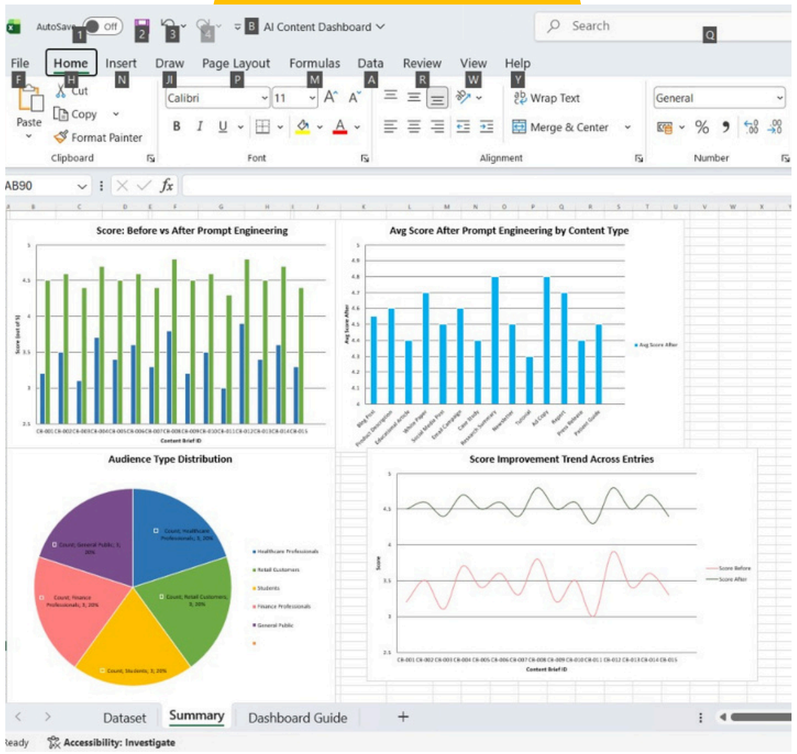
Output / Dashboard

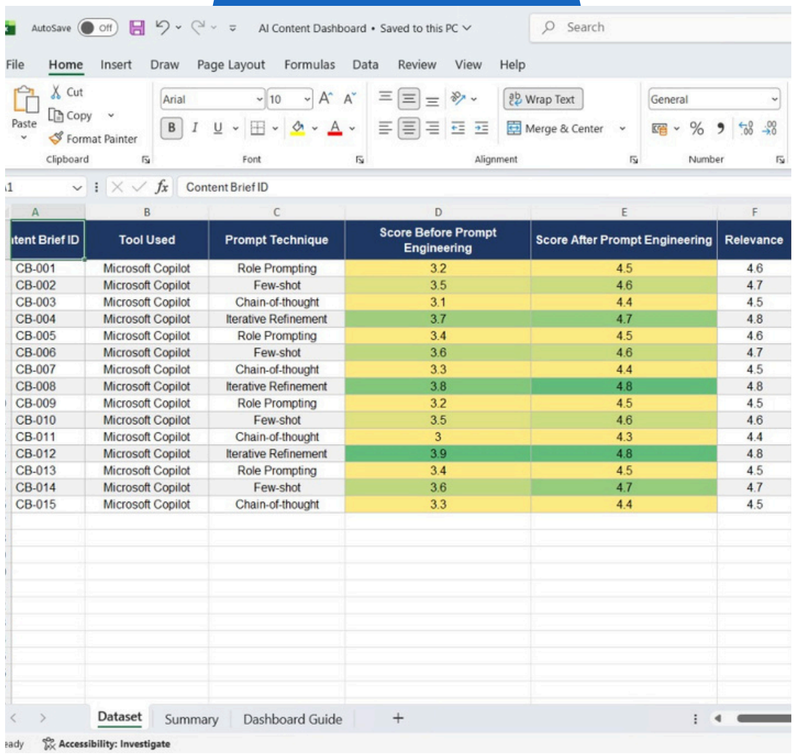
marketing content
Excel dashboard showing performance comparison

Live Demo of Project

Here's the list of some demo screenshots / features of the project:







https://drive.google.com/file/d/1KShEjqseIjmV_3N9xyfuixQQ5t2R2RYt/view?usp=drivesdk

Conclusion

The project demonstrates that structured prompt engineering significantly improves the quality of AI-generated content.
The average score improved from 3.43 to 4.54, showing a 32.5% increase.
It highlights that the effectiveness of AI depends more on how it is used rather than the tool itself.

Future Scope

[Describe the future enhancements and improvements planned for this project. Mention additional features, scalability plans, integration possibilities, or further research areas that can extend the project's impact.]

Thank You
